Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Luecke (541206).

Luecke discloses a mover assembly in fig. 1-18 comprising: a motor fig.2 (34) including a motor output (, 34a, 36a, 38a); and a coupling assembly (21,22,21) including a stage (21) that couples the motor output (38) to the object (42) and a stage guide (7a, 7b, 7c) that guides the motion of the stage along the first axis. Wherein, the motor output (38) is moved along the first axis and about the first axis. Luecke also discloses the stage guide as a linear bearing that allows for the motion of the stage along the first axis and inhibits motion of the stage about the second and third axis(represented by the movement of the actuators 34a, 36a,38a). Wherein, the motor includes a piezoelectric element fig.6A (51) that causes rotation of the motor output (34a, 36a, 38a); and a pair of jaw elements (60a, 61a) that engage the motor output (80). Luecke also show that the piezoelectric element moves relative to each other. Luecke further discloses, a measurement system (110,120,130) that provided information regarding the move movement of the stage (21) wherein, the measurement system includes a first component fig.2 (42) that is secured to and move with the stage. The method is inherent based on the structural limitations of the claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karen B. Addison whose telephone number is 571-272-2017. The examiner can normally be reached on 8:00 to 4:30.
